PROFILE

Informatics Engineering graduate (University of Minho) who designs and ships complete applications end-to-end. Core languages Java and TypeScript, with hands-on experience integrating AI services, Docker, and CI/CD across independently delivered projects on Desktop, Web, and Mobile.

EDUCATION

B.Sc. in Informatics Engineering | University of Minho 2023 – 2026

- Mean Grade: 14/20.
- Relevant coursework: Object-Oriented Programming (Java), Software Analysis & Testing (JUnit, EvoSuite), Computer Systems Security, Computer Networks, Language Processing.

TECHNICAL SKILLS

Languages:	Java, TypeScript, JavaScript, Python, Rust, C
Frameworks:	React, Node.js, Express, Tauri
Databases/Tools:	PostgreSQL, Supabase, Git, Linux/Bash
Cloud & DevOps:	Docker, Docker Compose, GitHub Actions (CI/CD)
AI & LLMs:	DeepSeek API, Ollama, Local LLMs, Prompt Engineering
Testing:	JUnit, EvoSuite, Hypothesis, Property-Based Testing
Spoken:	Portuguese (Native), English (Fluent)

PROJECTS

Reddit Story Pipeline 🔄 2025 – August 2026

Stack: Python, DeepSeek API, Docker, Automation

- Designed and delivered an end-to-end automated pipeline that turns Reddit stories into narrated, subtitled vertical videos, integrating the DeepSeek LLM API for rewriting, TTS voiceover, and subtitle rendering.
- Engineered a containerized architecture with Docker Compose, persistent session management, and multi-platform publishing to TikTok, Instagram, and YouTube.
- Built in reliability from day one: state persistence, post deduplication, dry-run mode for staged rollout, and cron/Ofelia scheduling for up to 3 posts per day.

Zenyth IDE 🔄 November 2025 – Present

Stack: React, TypeScript, Tauri, Rust, Ollama

- Developed a native desktop IDE that streams terminal I/O bidirectionally with zero data loss, enabling real-time code execution from a Tauri-wrapped React interface.
- Designed a Rust proxy for local LLM inference (Ollama) with sub-100ms first-token latency, handling backpressure, cancellation, and graceful error recovery.
- Architected the React-to-Rust IPC bridge that ports a web-based editor into a fully native desktop application.

VencordMobile 🔄 2025 – Present

Stack: Dart (Flutter), JavaScript, WebView, CI/CD

- Shipped an Android client that loads Discord's mobile web app and injects the Vencord plugin bundle (155+ plugins), enabling features unavailable in any other mobile client.
- Engineered a Flutter-to-JavaScript bridge via postMessage for bidirectional native-web communication with synchronized state.
- Automated delivery end-to-end: esbuild bundling of 155+ plugins into a single IIFE, with GitHub Actions producing signed APKs on each release tag.
